

## EXECUTIVE SUMMARY

MI WDS: The Waste Data System (WDS) tracks activities at facilities regulated by the Solid Waste, Scrap Tire, Hazardous Waste, and Liquid Industrial Waste programs.

A review of the MI WDS list, as provided by EDR, and dated 08/11/2022 has revealed that there is 1 MI WDS site within approximately 0.001 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

SSTS (Section Seven Tracking System ) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110001844915

[Click Here for FRS Facility Detail Report:](#)

**Environmental Interest/Information System:**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

[Click Here for FRS Facility Detail Report:](#)

**Environmental Interest/Information System:**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Name: FORMER GMA COVER CORP. PROPERTY  
 Address: 2440 20TH STREET  
 City,State,Zip: PORT HURON, MI 48060  
 Recipient Name: St. Clair County Brownfield Redevelopment Authority  
 Grant Type: Assessment  
 Property Number: 74-06-207-0001-100  
 Parcel size: 6.2  
 Latitude: 42.957623  
 Longitude: -82.445598  
 HCM Label: Address Matching-House Number  
 Map Scale: -  
 Point of Reference: Other Point  
 Highlights: The subject property consists of one parcel of land totaling approximately 6.2 acres. The 6.2-acre property is developed with a 62,000-square-foot industrial building located in the northwest portion of the parcel. The site building was built in 1991. The remaining portions of the property include asphalt-paved parking lot areas in the south and vacant grass-covered land in the eastern half of the site. Historically, the subject property was occupied by Waltec Forgings Inc. from the mid 1990s to 2004 and most recently occupied by a manufacturer identified as GMA Cover Corporation (GMA). The subject property has been unoccupied since February of 2013. previous environmental assessment activities in 2012 by Innovative Environmental Solutions Inc. (Innovative) resulted in the detection of aluminum in soil and groundwater. Innovative concluded that the aluminum in both soil and groundwater exceeds residential cleanup criteria. However, this conclusion is not necessarily valid. Soil concentrations were within the range of aluminum found state-wide and are not necessarily indicative of a release. It is unclear how groundwater data was collected (filtered or unfiltered

MAP FINDINGS

**FORMER GMA COVER CORP. PROPERTY (Continued)**

**1016603715**

samples, monitoring wells versus Geoprobe screen point sampling, etc.) and thus, it is not clearly demonstrated that the data are representative of groundwater conditions. Subsequently, Envirologic conducted Groundwater sampling activities at the site. Groundwater samples were collected from the newly installed monitoring wells on May 22, 2014. Groundwater sampling was conducted using low-flow sampling techniques in accordance with RRD. The concentration of dissolved aluminum in MW-4@3.7-8.7 exceeded Residential Drinking Water Criteria. Since laboratory analysis of both dissolved and total aluminum in groundwater samples is highly sensitive to factors such as well development and turbidity, monitoring well MW-4 was resampled in order to verify whether or not the original analytical result is representative of aquifer conditions. Envirologic resampled MW-4 on June 2, 2014. The elevation was measured from the top of casing to survey the groundwater flow direction at the site and was confirmed to the north-northwest. Aluminum was detected above drinking water criteria during the second sampling activity at the site from Monitoring well MW-4. MW-4 is situated hydraulically upgradient from the main building where facility operations occurred. Therefore it is unlikely that the occurrence of aluminum at concentrations greater than Residential Drinking Water Criteria is related to former operations at the subject property. Former Use: Prior to the current development at the site the property was used for agricultural purposes, residential development or vacant land. According to City assessor and building records, the subject property building was first occupied by Waltec Forgings Inc. in the early 1990s. According to city directories Waltec Forgings occupied the property from at least 1994 to 2004. Waltec was a manufacturing company that produced lead free brass alloys for plumbing and other industrial applications using brass copper and aluminum forging operations. Additional information on the previous use of the subject property by Waltec Forgings Inc. is provided in the Records Review Section of this report. From 2005 to 2013 the subject property was occupied by GMA Cover Corp. (GMA). Items manufactured by GMA included plastic concealment products such as camouflage net systems, parachutes, flexible fuel and water storage tanks, vehicle soft-top systems and tactical soft shelters, primarily for the U.S. Department of Defense. Envirologic was able to interview Mr. Harry Both, a former employee of GMA. Mr. Both informed Envirologic that no chemicals or hazardous substances were used or stored at the property during the occupancy of GMA. According to Mr. Both, GMA's manufacturing process consisted of using vinyl and radio frequency welding and large industrial sewing machine

Address: 2440 20TH STREET  
City,State,Zip: PORT HURON, MI 48060  
Recipient Name: St. Clair County Brownfield Redevelopment Authority  
Grant Type: Assessment  
Property Number: 74-06-207-0001-100  
Parcel size: 6.2  
Latitude: 42.957623  
Longitude: -82.445598  
HCM Label: Address Matching-House Number  
Map Scale: -  
Point of Reference: Other Point  
Highlights:

The subject property consists of one parcel of land totaling approximately 6.2 acres. The 6.2-acre property is developed with a 62,000-square-foot industrial building located in the northwest portion of the parcel. The site building was built in 1991. The remaining portions of the property include asphalt-paved parking lot areas in the south and vacant grass-covered land in the eastern half of the site. Historically, the subject property was occupied by Waltec Forgings Inc. from the mid 1990s to 2004 and most recently occupied by a manufacturer identified as GMA Cover Corporation (GMA). The subject property has been unoccupied since February of 2013. previous environmental assessment activities in 2012 by Innovative Environmental Solutions Inc. (Innovative) resulted in the detection of aluminum in soil and groundwater. Innovative concluded that the aluminum in both soil and groundwater exceeds residential cleanup criteria. However, this conclusion is not necessarily valid. Soil concentrations were within the range of aluminum found state-wide and are not necessarily indicative of a release. It is unclear how groundwater data was collected (filtered or unfiltered samples, monitoring wells versus Geoprobe screen point sampling, etc.) and thus, it is not clearly demonstrated that the data are representative of groundwater conditions. Subsequently, Envirologic conducted Groundwater sampling activities at the site. Groundwater samples were collected from the newly installed monitoring wells on May 22, 2014. Groundwater sampling was conducted using low-flow sampling techniques in accordance with RRD. The concentration of dissolved aluminum in MW-4@3.7-8.7 exceeded Residential Drinking

MAP FINDINGS

Water Criteria. Since laboratory analysis of both dissolved and total aluminum in groundwater samples is highly sensitive to factors such as well development and turbidity, monitoring well MW-4 was resampled in order to verify whether or not the original analytical result is representative of aquifer conditions. Envirologic resampled MW-4 on June 2, 2014. The elevation was measured from the top of casing to survey the groundwater flow direction at the site and was confirmed to the north-northwest. Aluminum was detected above drinking water criteria during the second sampling activity at the site from Monitoring well MW-4. MW-4 is situated hydraulically upgradient from the main building where facility operations occurred. Therefore it is unlikely that the occurrence of aluminum at concentrations greater than Residential Drinking Water Criteria is related to former operations at the subject property. Former Use: Prior to the current development at the site the property was used for agricultural purposes, residential development or vacant land. According to City assessor and building records, the subject property building was first occupied by Waltec Forgings Inc. in the early 1990s. According to city directories Waltec Forgings occupied the property from at least 1994 to 2004. Waltec was a manufacturing company that produced lead free brass alloys for plumbing and other industrial applications using brass copper and aluminum forging operations. Additional information on the previous use of the subject property by Waltec Forgings Inc. is provided in the Records Review Section of this report. From 2005 to 2013 the subject property was occupied by GMA Cover Corp. (GMA). Items manufactured by GMA included plastic concealment products such as camouflage net systems, parachutes, flexible fuel and water storage tanks, vehicle soft-top systems and tactical soft shelters, primarily for the U.S. Department of Defense. Envirologic was able to interview Mr. Harry Both, a former employee of GMA. Mr. Both informed Envirologic that no chemicals or hazardous substances were used or stored at the property during the occupancy of GMA. According to Mr. Both, GMA's manufacturing process consisted of using vinyl and radio frequency welding and large industrial sewing machine

Parcel size: 6.2  
Latitude: 42.957623  
Longitude: -82.445598  
HCM Label: Address Matching-House Number  
Map Scale: -  
Point of Reference: Other Point  
Highlights: The subject property consists of one parcel of land totaling approximately 6.2 acres. The 6.2-acre property is developed with a 62,000-square-foot industrial building located in the northwest portion of the parcel. The site building was built in 1991. The remaining portions of the property include asphalt-paved parking lot areas in the south and vacant grass-covered land in the eastern half of the site. Historically, the subject property was occupied by Waltec Forgings Inc. from the mid 1990s to 2004 and most recently occupied by a manufacturer identified as GMA Cover Corporation (GMA). The subject property has been unoccupied since February of 2013. previous environmental assessment activities in 2012 by Innovative Environmental Solutions Inc. (Innovative) resulted in the detection of aluminum in soil and groundwater. Innovative concluded that the aluminum in both soil and groundwater exceeds residential cleanup criteria. However, this conclusion is not necessarily valid. Soil concentrations were within the range of aluminum found state-wide and are not necessarily indicative of a release. It is unclear how groundwater data was collected (filtered or unfiltered samples, monitoring wells versus Geoprobe screen point sampling, etc.) and thus, it is not clearly demonstrated that the data are representative of groundwater conditions. Subsequently, Envirologic conducted Groundwater sampling activities at the site. Groundwater samples were collected from the newly installed monitoring wells on May 22, 2014. Groundwater sampling was conducted using low-flow sampling techniques in accordance with RRD. The concentration of dissolved aluminum in MW-4@3.7-8.7 exceeded Residential Drinking Water Criteria. Since laboratory analysis of both dissolved and total aluminum in groundwater samples is highly sensitive to factors such as well development and turbidity, monitoring well MW-4 was resampled in order to verify whether or not the original analytical result is representative of aquifer conditions. Envirologic resampled MW-4 on June 2, 2014. The elevation was measured from the top of casing to survey the groundwater flow direction at the site and was confirmed to the north-northwest. Aluminum was detected above drinking water criteria during the second sampling activity at the site from Monitoring well MW-4. MW-4 is situated hydraulically upgradient from the main building where facility operations occurred. Therefore it is unlikely that the occurrence of aluminum at concentrations greater than Residential Drinking Water Criteria is related to former operations at the subject property. Former Use: Prior to the current development at the site the property was used for agricultural purposes, residential development or vacant land. According to City assessor and building records, the subject property building was first occupied by Waltec Forgings Inc. in the early 1990s. According to city directories Waltec Forgings occupied the property from at least 1994 to 2004. Waltec was a manufacturing company that produced lead free brass alloys for plumbing and other industrial applications using brass copper and aluminum forging operations. Additional information on the previous use of the subject property by Waltec Forgings Inc. is provided in the Records Review Section of this

report. From 2005 to 2013 the subject property was occupied by GMA Cover Corp. (GMA). Items manufactured by GMA included plastic concealment products such as camouflage net systems, parachutes, flexible fuel and water storage tanks, vehicle soft-top systems and tactical soft shelters, primarily for the U.S. Department of Defense. Envirologic was able to interview Mr. Harry Both, a former employee of GMA. Mr. Both informed Envirologic that no chemicals or hazardous substances were used or stored at the property during the occupancy of GMA. According to Mr. Both, GMA s manufacturing process consisted of using vinyl and radio frequency welding and large industrial sewing machine

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
